

POLE REPLACEMENT & CONDUCTOR WORKS

Project: 31 Pole Replacement & Conductor Works
Client: TXU
Location: High Plains areas of East Gippsland
Contract Value: AUS \$40,000.00

Electrix crews with associated plant and equipment responded to a call for help from TXU, a major Victorian Distributor, during the Bush Fire disaster in January 2003.

The fires caused extensive damage to distribution assets in the high plains areas of East Gippsland. The Electrix crews responded within hours and mobilized to a remote area some 400 km's away. Over a 3 day period, with fires still burning around them, the crews worked 15 hour days to complete 31 pole replacement and associated conductor works.

Electrix received huge praise for their efforts. It is our ability to perform in these types of emergencies that makes us a valued contractor within the Industry.
